MFS TECHNOLOGY RECEIVED BOE TECHNOLOGY STRATEGIC SUPPLIER AWARD

MFS Technology has recently been given the Strategic Supplier Award from BOE Technology – one of the world’s top display company. Before, MFS was also awarded with the “Excellent Quality Award” from the world’s biggest automotive display maker, Tianma Microelectronics.

With increased uses of the internet for autonomous drive and electric vehicle, many car makers have adopted larger screen size in their Center Stack Display (CSD) and Instrument Cluster Display (ISD). These products require stringent process controls in dimension stability, particularly for mass scale manufacturing.

Capitalizing on its core competency in this area, MFS started its 4th highly automated manufacturing plant in China last year to meet increased demand. MFS is also supplying to many 1st-tier automotive equipment manufacturers covering EV battery, battery management systems, onboard chargers, and powertrain systems.
